

EW9T Intelligent Power Meter Operation Manual

2013 Version V. 1

Operation Manual

Please refer to the manual during install and operation

»» OPEN

Instructions

User Instructions

Please read the manual before using the products :

1. During operation, note the waterproof ,anti-sunshine and anti-crash
2. Normal install and test instruments are as blow:
Slotted screwdriver and digital multi-meter
3. To ensure the accuracy of the meter. Please input the suitable voltage and current signal. If the input voltage and current is less than range , can direct input the voltage and current. If beyond the range , please input via PT and CT.
4. PT or CT accuracy will effect the meter accuracy. The secondary output should connect thick and short low impedance conductor to reduce interference.

- Note:We keep the authority to modify and update the product.
And we will not inform when make updatation for the manual.

Product Description

Wire Connection

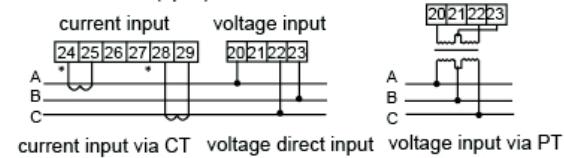

Note: Voltage input terminals , bracket terminals shows 3 phase 3 wire connection method.
Current * means current input terminal , all input and output must be coincident.

Mode 1 (3pcs): 3 phase 4 wire connection

Mode 2 (2pcs): 3 Phase 3 wire connection

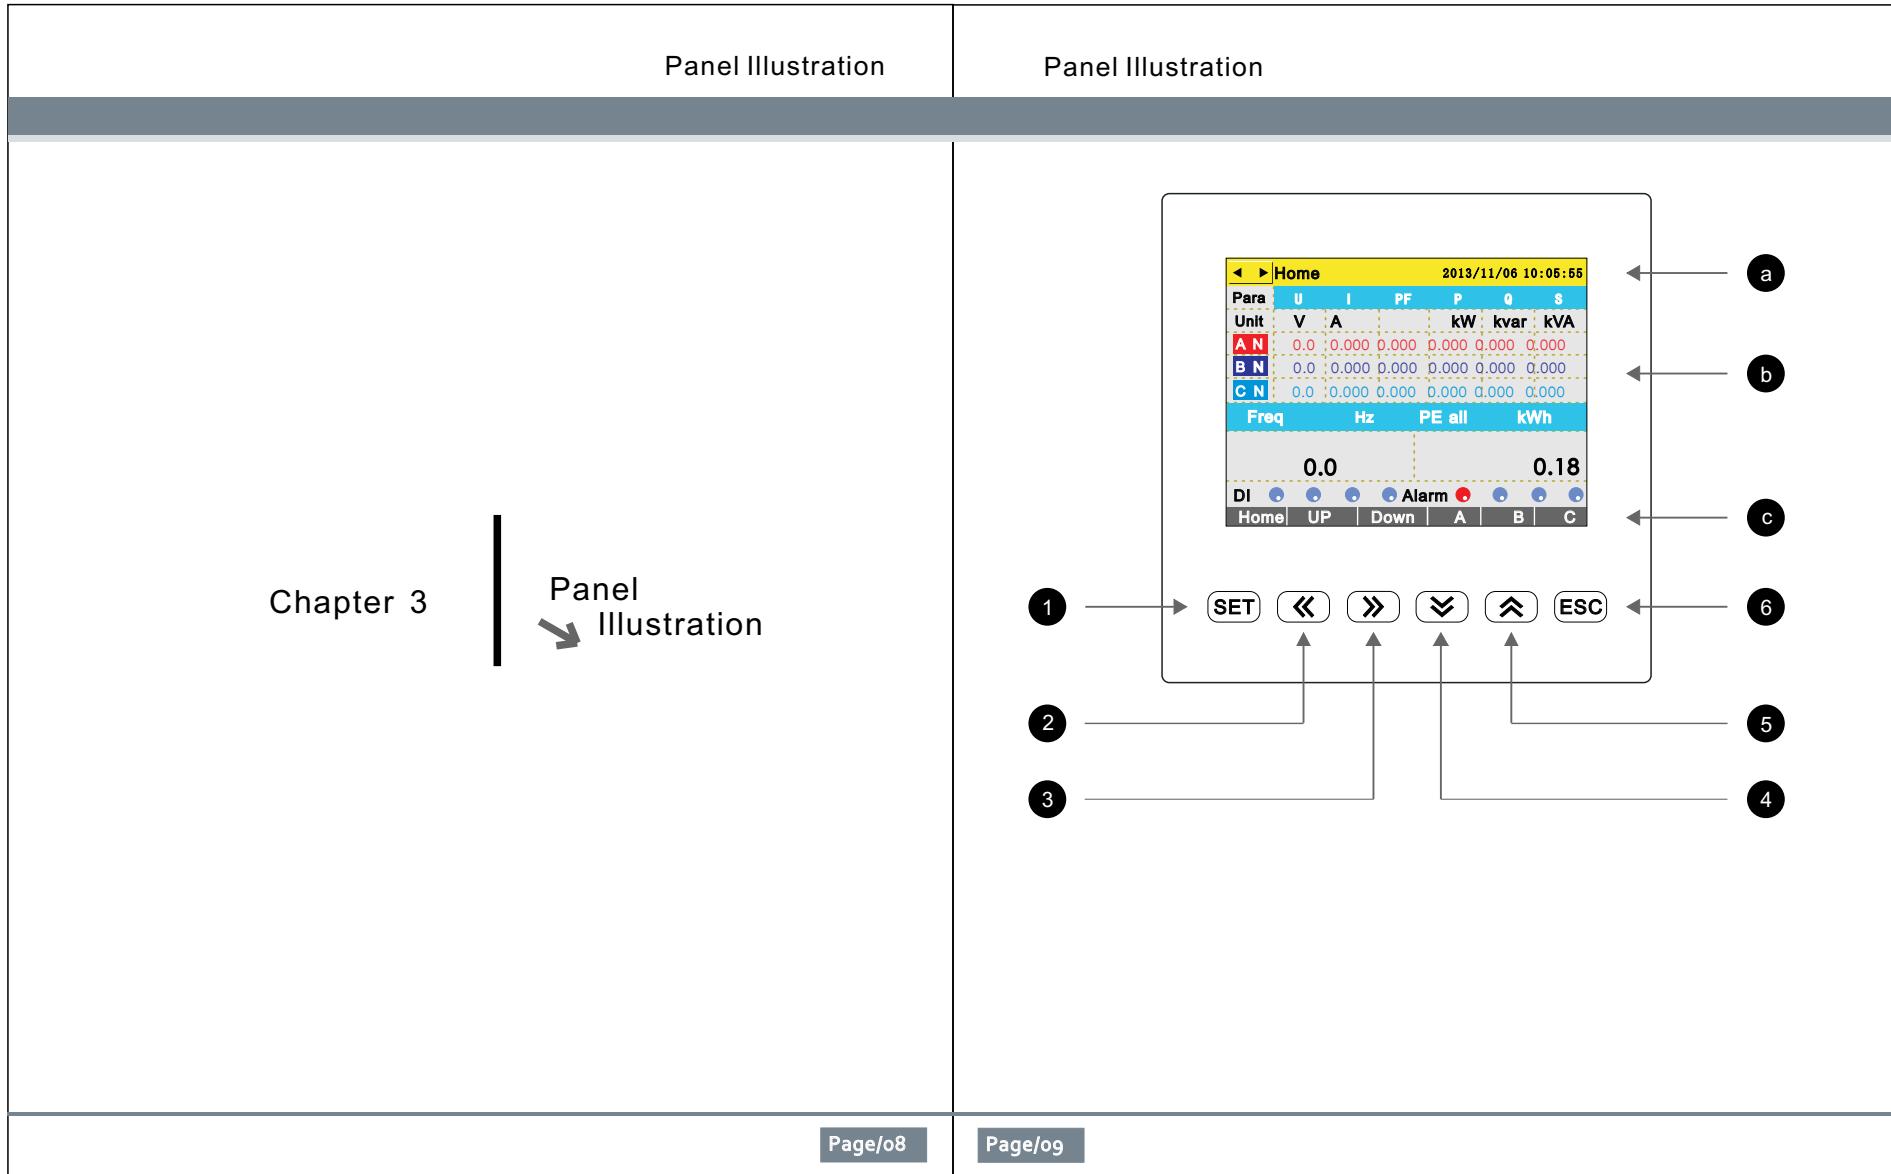

Chapter 1

Product
Description

Product Description	Main Technical Parameters
<ul style="list-style-type: none"> ● Measure Parameters: 3 phase voltage , current , active power , reactive power ,power factor, apparent power, Kwh , frequency etc. ● True effective value measurement . Accuracy is 0.5%F.S, when frequency is 0-420Hz , can meet military requirement. ● Optional 4 loops switch input and switch output ,input and output are fully isolated. With remote communication and control function. ● With programmable transmit output function for the voltage , current, active power , reactive power, frequency , power factor. ● Optional 2 loops Rs485 communication, Modbus RTU or DLT645 protocol. ● 2 loops energy pulse output. ● Maximum demand statistics function , include current, active power , reactive power, apparent power .(15 minutes one cycle) ● With harmonics analysis function . ● Power failure memory function of Kwh and KvarH . ● With bidirectional active power and reactive power record function. ● Programmable 8 period and 4 different tariff rate function. ● With 32 events record function , can record the power on event , clear Kwh event , modify parameter event and alarm event etc. ● 320*240 TFT color 320×240 LCD display. <p>This meter can directly or indirectly measure 3 phase 3 wire and 3 phase 4 wire net voltage , current , active power, reactive power, power factor etc.It can be widely applied to control system, SCADA system and energy management system,transformer substation automation, distributing net automation, electric power monitor, industrial automation, intelligent construction, switch cabnit . It is easy to install and maintain , simple connection and programmable setting parameters.</p>	<p>Chapter 2</p>  <p>Main Technical Parameters</p>

Page shift Illustration

Check Measuring value and working status indication:
1. In measure status , press \langle/\rangle to shift display of home page , phase voltage, line voltage, line current, active power , reactive power , apparent power, power factor, all phase parameter , present Kwh , history Kwh , total harmonic , tariff rate etc.

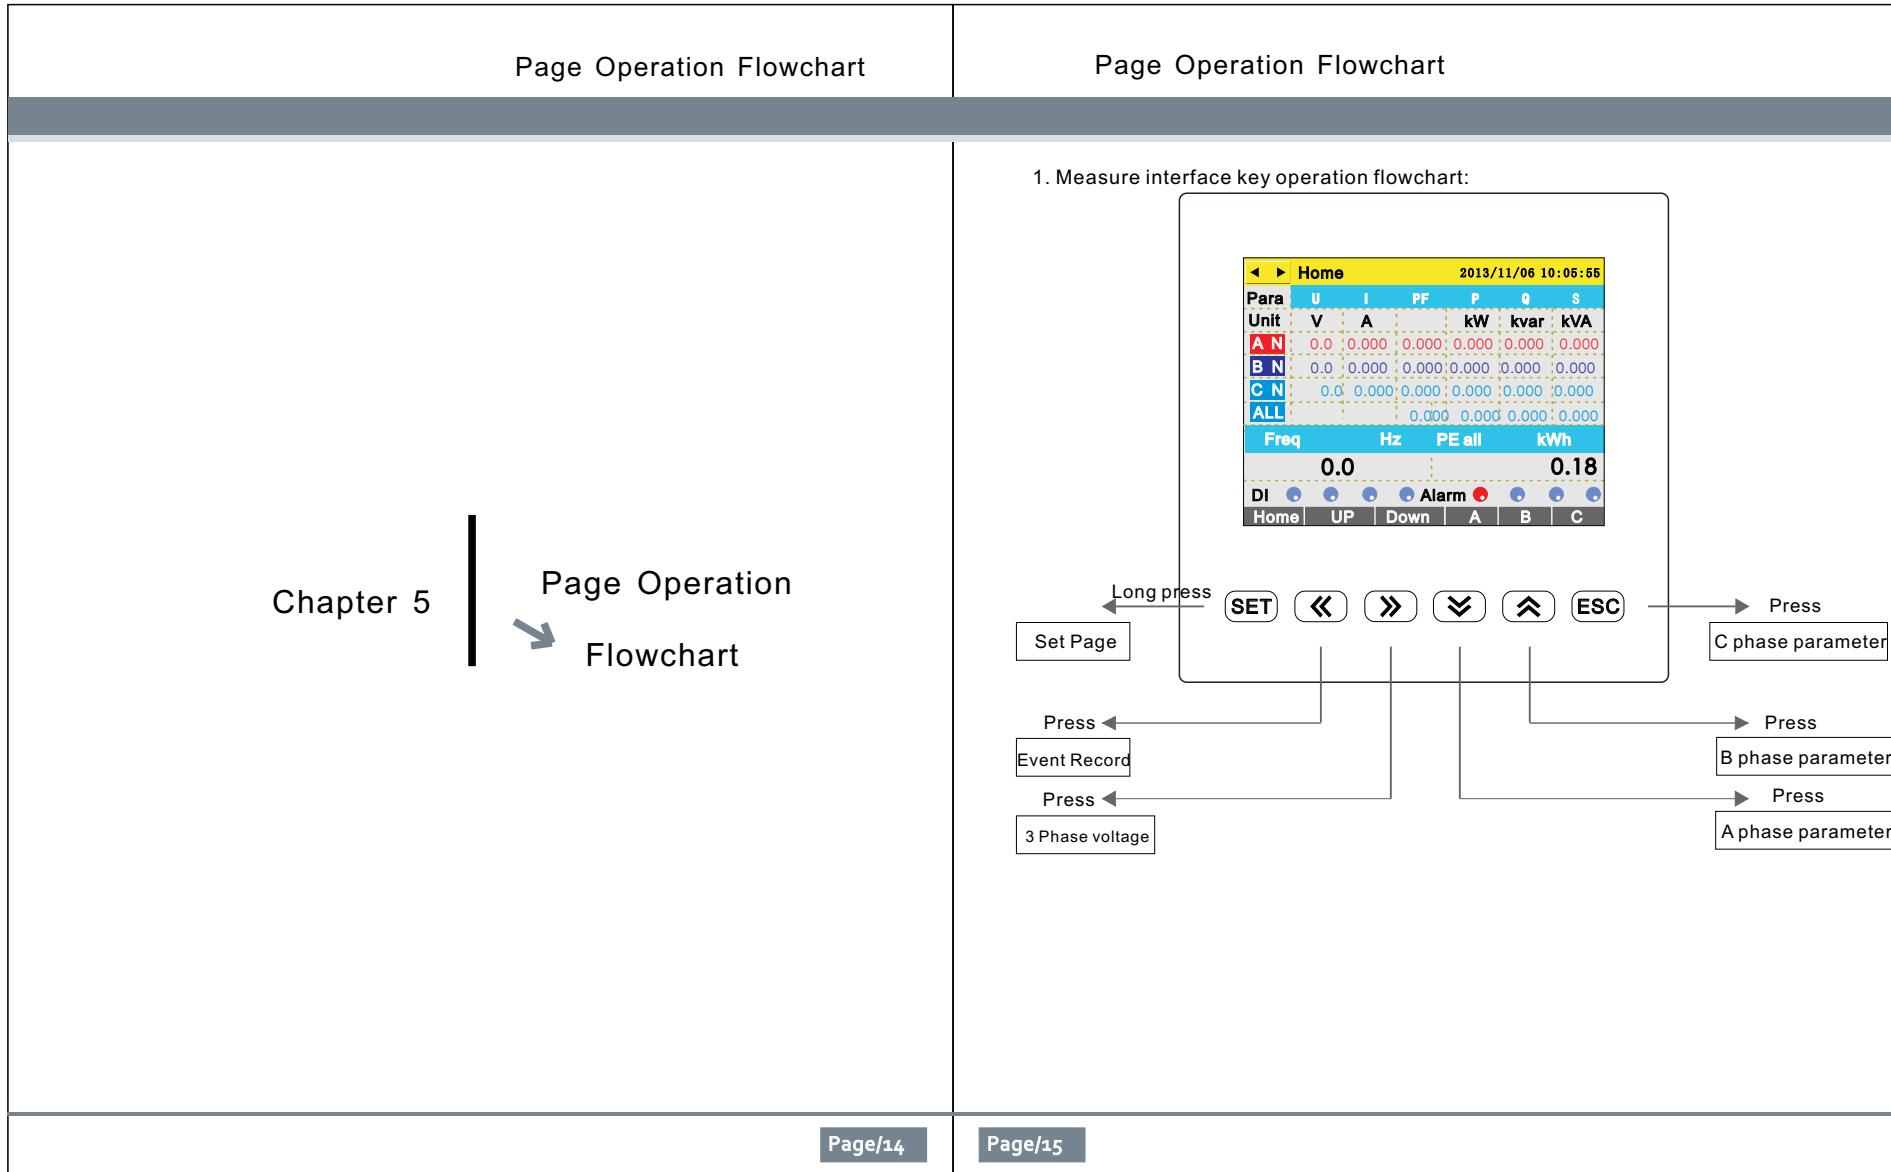

2. In measure status , press SET to return the home page from any interface.

3. In measure status , the last line of display indicate the key function . Eg : A phase , means thatwhen press the key , it displays A phase parameters.

4. In measure status ,long press SET key to enter setting interface. (If have set the password , need to input the correct password to get to the setting page.)

Menu Operation
& Illustration

Menu Operation&Illustration

1. The method of Changing the data in data input frame

When cursor is on the data ,press \approx or ∇ to pop-up data input frame.

When cursor is on data input frame , press \approx/∇ to increase or decrease value . Press \langle/\rangle to shift the cursor to the left or right. Press SET key to confirm. Eg: Input 600 in CT setting frame is as blow:

1. Press SET key for several seconds to enter setting menu.
2. Press \langle/\rangle to move the cursor to Signal Set menu
3. Press SET key to enter signal setting interface
4. Press \langle/\rangle to move the cursor to CT menu
5. Press \approx/∇ to pop-up data input frame
6. Press \approx/∇ to change the first digit as 6 , then press \rangle to move cursor to second digit to make modification. The same operation method for the third digit.

Menu Operation&Illustration

		Mode	Transmit mode	1~26
5	Trans Set	Unit	Transmit unit is set as 1 or K	0~1 Note①
		High Limit	Transmit high limit (default 0.0)	0~600. 0
		Low Limit	Transmit low limit(default 400.0)	0~600. 0
6	Tariff Set	1	Sharp Rate (Default)	0~3
		2	Peak Rate(default)	0~3
		3	Off-Peak Rate(default)	0~3
		4	Shoulder Rate(default)	0~3
		5	Sharp Rate (Default)	0~3
		6	Peak Rate(default)	0~3
		7	Off-Peak Rate(default)	0~3
		8	Shoulder Rate(default)	0~95
	Start Time	1	Default start time is 0 clock	0~95
		2	Default start time is 3 clock	0~95
		3	Default start time is 6 clock	0~95
		4	Default start time is 9 clock	0~95
		5	Default start time is 12 clock	0~95
		6	Default start time is 15 clock	0~95
		7	Default start time is 18 clock	0~95
		8	Default start time is 21 clock	0~95

- 1: International standard unit.
K: 1000 times international standard unit , alarm value and alarm hysteresis unit are the same.

Chapter 7

Communication Protocol

Communication Protocol				Communication Protocol																																											
<p>EW9T meter adopt Modbus RTU protocol Rs485 half duplex communication , read function code is 0x03, write function code is 0x10, adopt 16 digit CRC check bit . Meter does not feedback the check error.</p> <p>Data format is as blow:</p> <table border="1"> <tr> <td>Start bit</td><td>Data bit</td><td>Stop bit</td><td>Check bit</td></tr> <tr> <td>1</td><td>8</td><td>1</td><td>No</td></tr> </table> <p>Communication abnormal solution:</p> <p>When abnormal answer , the highest bit of function code will be set to 1. Eg: If the request function code from host is 0x04 , function code from slaver is 0x84.</p> <p>Error type code:</p> <ul style="list-style-type: none"> 0x01---Function code error: Meter does not support the function code it receives. 0x02---Data position error: The data position sent by host is out of range of meter. 0x03---Data value error: The data value sent from host is out of range of meter. <p>1 Read Multi-register</p> <p>Eg: Host reads UA (A phase voltage)</p> <p>UA address code is 0x4000,becasue UA is fixed point number (4 byte), seizes 2 data register. 220.000V data bit is 0x00035B60</p> <table border="1"> <tr> <td colspan="8">Host Request</td></tr> <tr> <td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td></tr> <tr> <td>Meter address</td><td>Function code</td><td>Start address high bit</td><td>Start address low bit</td><td>Data length high bit</td><td>Data length low bit</td><td>CRC code low bit</td><td>CRC code high bit</td></tr> <tr> <td>0X01</td><td>0X03</td><td>0X40</td><td>0X00</td><td>0X00</td><td>0X02</td><td>0XD1</td><td>0XCB</td></tr> </table>								Start bit	Data bit	Stop bit	Check bit	1	8	1	No	Host Request								1	2	3	4	5	6	7	8	Meter address	Function code	Start address high bit	Start address low bit	Data length high bit	Data length low bit	CRC code low bit	CRC code high bit	0X01	0X03	0X40	0X00	0X00	0X02	0XD1	0XCB
